DETAILED ACTION

This office action is in response to the RCE filed 3/3/03.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/27/03 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 34 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lin et al (5,851,881) in view of Hunter et al (4,631,803).

Lin et al teach a flash memory comprising a substrate 10;

A first gate oxide layer 30 atop the substrate 10;

A floating gate 32 atop the gate oxide layer 30;

Application/Control Number: 10/029,622

Art Unit: 2822

a trench 71 formed through the floating gate 32 and gate oxide 30 layers into the substrate 10 wherein the vertical surfaces of the floating gate 32, the gate oxide layer 30 and the substrate 10 form interior trench walls;

a second gate oxide layer 41; and

a control gate 44 atop the second gate oxide 41.

See Fig. 1G and accompanying text.

However, Lin et al do not teach that there are two conformal layers lining the interior trench walls.

Hunter et al teach a STI structure wherein there are two conformal layers lining the inside walls of the trench and wherein a first conformal lining 38 comprises oxide having a thickness between about 200 to 450 Angstroms (col. 3, lines 40-42) and a second conformal lining 40 comprises nitride having a thickness between about 300 to 600 Angstroms (col. 3, lines 45-48). See Fig. 2 and accompanying text.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the structure taught by Lin et al by forming two conformal layers lining the trench in order to reduce the formation of the vertical bird's beak structure in the trench (see Hunter et al, col. 3, lines 21-24).

Response to Arguments

Applicant's arguments with respect to claim 34 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/029,622

Art Unit: 2822

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. L. Brophy whose telephone number is (703) 308-6182. The examiner can normally be reached on M-F (8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on (703) 308-4905. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
